

Consumer Confidence Report Certification Form

(to be submitted with a copy of the CCR)

(to certify electronic delivery of the CCR, use the certification form on the State Water Board's website at http://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/CCR.shtml)

Water System Name: **VENTURA RIVER WATER DISTRICT**

Water System Number: **5610022**

The water system above hereby certifies that its Consumer Confidence Report was distributed on June 22, 2020 (date) to customers (and appropriate notices of availability have been given). Further, the system certifies that the information contained in the report is correct and consistent with the compliance monitoring data previously submitted to the State Water Resources Control Board, Division of Drinking Water.

Certified By: Name Bert J. Rapp
Signature _____
Title General Manager
Phone Number (805) 646-3403 Date June 22, 2020

To summarize report delivery used and good-faith efforts taken, please complete the form below by checking all items that apply and fill-in where appropriate:

CCR was distributed by mail or other direct delivery methods. Specify other direct delivery methods used:

"Good faith" efforts were used to reach non-bill paying customers. Those efforts included the following methods:

Posted the CCR on the internet at http:// www.VenturaRiverWD.com/Reports

Mailed the CCR to postal patrons within the service area (attach zip codes used)

Advertised the availability of the CCR in news media (attach a copy of press release)

Publication of the CCR in a local newspaper of general circulation (attach a copy of the published notice, including name of the newspaper and date published)

Posted the CCR in public places (attach a list of locations)

Delivery of multiple copies of CCR to single bill addresses serving several persons, such as apartments, businesses, and schools

Delivery to community organizations (attach a list of organizations)

Other (attach a list of other methods used) **Notified every customer using a message on the water bills & provided link to CCR on the website.**

For systems serving at least 100,000 persons: Posted CCR on a publicly-accessible internet site at the following address: http:// _____

For privately-owned utilities: Delivered the CCR to the California Public Utilities Commission

2019 Consumer Confidence Report

Water System Name: VENTURA RIVER WATER DISTRICT

Report Date: May 2020

We test the drinking water quality for many constituents as required by state and federal regulations. This report shows the results of our monitoring for the period of January 1 - December 31, 2019.

Este informe contiene información muy importante sobre su agua potable. Tradúzcalo ó hable con alguien que lo entienda bien.

Type of water source(s) in use: According to SWRCB records, this Sources Well 01 and Well 02 are Groundwater. This Assessment was done using the Default Groundwater System Method. The source of Well 03, Well 04 and Well 07 are groundwater.

Please see the Drinking Water Source Assessment Information section located at the end of this report for more details.

Your water comes from 5 source(s): Well 01 (1989), Well 02, Well 03 - Active, Well 04 (2007) and Well 07 (New) **and from 1 treated location(s):** Baldwin Tank #2 - NO3 BLEND

Opportunities for public participation in decisions that affect drinking water quality: Regularly-scheduled Water District Board meetings held on the third Wednesday of the month at 3:00 p.m. at 409 Old Baldwin Road.

For more information about this report, or any questions relating to your drinking water, please call 8056463403 and ask for Bert Rapp or email Bert@VenturaRiverWD.com or visit our website at www.VenturaRiverWD.com.

TERMS USED IN THIS REPORT

Maximum Contaminant Level (MCL): The highest level of contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically feasible. Secondary MCLs are set to protect the odor, taste, and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for the contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Secondary Drinking Water Standards (SDWS): MCLs for the contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWSs do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Regulatory Action Level (AL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

Level 1 Assessment: A Level 1 assessment is a study of the water system to identify potential problems and determine (if possible) why total coliform bacteria have been found in our water system.

Level 2 Assessment: A Level 2 assessment is a very detailed study of the water system to identify potential problems and determine (if possible) why an E. coli MCL violation has occurred and/or why total coliform bacteria have been found in our water system on multiple occasions.

ND: not detectable at testing limit

mg/L: milligrams per liter or parts per million (ppm)

ug/L: micrograms per liter or parts per billion (ppb)

pCi/L: picocuries per liter (a measure of radiation)

NTU: Nephelometric Turbidity Units

umhos/cm: micro mhos per centimeter

The sources of drinking water: (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- *Microbial contaminants*, such as viruses and bacteria, that may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- *Inorganic contaminants*, such as salts and metals, that can be naturally-occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining, or farming.
- *Pesticides and herbicides*, that may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- *Organic chemical contaminants*, including synthetic and volatile organic chemicals, that are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff, agricultural application, and septic systems.
- *Radioactive contaminants*, that can be naturally-occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, the USEPA and the State Water Resource Control Board (State Water Board) prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. State Water Board regulations also establish limits for contaminants in bottled water that provide the same protection for public health.

Tables 1, 2, 3, 4, 5, 6, 7 and 8 list all of the drinking water contaminants that were detected during the most recent sampling for the constituent. The presence of these contaminants in the water does not necessarily indicate that the water poses a health risk. The State Water Board allows us to monitor for certain contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of the data, though representative of the water quality, are more than one year old.

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

Table 1 - SAMPLING RESULTS SHOWING THE DETECTION OF LEAD AND COPPER						
Lead and Copper (complete if lead or copper detected in last sample set)	Sample Date	90th percentile level detected	No. Sites Exceeding AL	AL	PHG	Typical Sources of Contaminant
Copper (mg/L)	20 (2019)	0.22	0	1.3	.3	Internal corrosion of household plumbing systems; erosion of natural deposits; leaching from wood preservatives

Table 2 - SAMPLING RESULTS FOR SODIUM AND HARDNESS						
Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant
Sodium (mg/L)	(2014 - 2017)	44	38 - 49	none	none	Salt present in the water and is generally naturally occurring
Hardness (mg/L)	(2014 - 2017)	396	371 - 419	none	none	Sum of polyvalent cations present in the water, generally magnesium and calcium, and are usually naturally occurring

Table 3 - DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD						
Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Sources of Contaminant
Aluminum (mg/L)	(2014 - 2017)	ND	ND - 0.06	1	0.6	Erosion of natural deposits; residue from some surface water treatment processes
Fluoride (mg/L)	(2014 - 2017)	0.4	ND - 0.5	2	1	Erosion of natural deposits; water additive that promotes strong teeth; discharge from fertilizer and aluminum factories.

Nitrate as N (mg/L)	(2014 - 2019)	2.2	1.2 - 2.9	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Nitrate + Nitrite as N (mg/L)	(2014 - 2017)	2.1	1.2 - 4.2	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits
Gross Alpha (pCi/L)	(2011 - 2019)	1.501	ND - 3.43	15	(0)	Erosion of natural deposits.

Table 4 - TREATED DETECTION OF CONTAMINANTS WITH A PRIMARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL [MRDL]	PHG (MCLG) [MRDLG]	Typical Sources of Contaminant
Nitrate as N (mg/L)	(2019)	2	n/a	10	10	Runoff and leaching from fertilizer use; leaching from septic tanks and sewage; erosion of natural deposits

Table 5 - DETECTION OF CONTAMINANTS WITH A SECONDARY DRINKING WATER STANDARD

Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL	PHG (MCLG)	Typical Sources of Contaminant
Chloride (mg/L)	(2014 - 2017)	44	28 - 57	500	n/a	Runoff/leaching from natural deposits; seawater influence
Iron (ug/L)	(2014 - 2017)	ND	ND - 100	300	n/a	Leaching from natural deposits; Industrial wastes
Specific Conductance (umhos/cm)	(2014 - 2017)	959	888 - 1020	1600	n/a	Substances that form ions when in water; seawater influence
Sulfate (mg/L)	(2014 - 2017)	216	177 - 241	500	n/a	Runoff/leaching from natural deposits; industrial wastes
Total Dissolved Solids (mg/L)	(2014 - 2017)	657	590 - 720	1000	n/a	Runoff/leaching from natural deposits
Turbidity (NTU)	(2014 - 2017)	0.7	ND - 1.3	5	n/a	Soil runoff

Table 6 - DETECTION OF UNREGULATED CONTAMINANTS

Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	Notification Level	Typical Sources of Contaminant
Boron (mg/L)	(2014 - 2017)	0.6	0.5 - 0.7	1	Boron exposures resulted in decreased fetal weight (developmental effects) in newborn rats.

Table 7 - ADDITIONAL DETECTIONS

Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	Notification Level	Typical Sources of Contaminant
Calcium (mg/L)	(2014 - 2017)	111	106 - 116	n/a	n/a
Magnesium (mg/L)	(2014 - 2017)	29	26 - 32	n/a	n/a
pH (units)	(2014 - 2017)	7.4	6.7 - 7.8	n/a	n/a
Alkalinity (mg/L)	(2014 - 2017)	218	180 - 260	n/a	n/a
Aggressiveness Index	(2014 - 2017)	12.2	11.5 - 12.6	n/a	n/a
Langelier Index	(2014 - 2017)	0.33	-0.4 - 0.8	n/a	n/a

Table 8 - DETECTION OF DISINFECTANT/DISINFECTANT BYPRODUCT RULE

Chemical or Constituent (and reporting units)	Sample Date	Average Level Detected	Range of Detections	MCL (MRDL)	PHG (MCLG)	Violation	Typical Sources of Contaminant
Total Trihalomethanes (TTHMs) (ug/L)	(2019)	75	4 - 95	80	n/a	No	By-product of drinking water disinfection
Chlorine (mg/L)	(2019)	2.84	0.3 - 3.5	4.0	4.0	No	Drinking water disinfectant added for treatment.
Haloacetic Acids (five) (ug/L)	(2019)	60.25	1 - 95	60	n/a	Yes	By-product of drinking water disinfection

Any violation of MCL, AL or MRDL is highlighted. Additional information regarding the violation is provided later in this report.

Additional General Information on Drinking Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the USEPA's Safe Drinking Water Hotline (1-800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. USEPA/Centers for Disease Control (CDC) guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline (1-800-426-4791).

Lead Specific Language for Community Water Systems: If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with the service lines and home plumbing. *Ventura River Water District* is responsible for providing high quality drinking water, but cannot control the variety of materials used in plumbing components. When your water has been sitting for several hours, you can minimize the potential for lead exposure by flushing your tap for 30 seconds to 2 minutes before using water for drinking or cooking. If you are concerned about lead in your water, you may wish to have your water tested. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available from the Safe Drinking Water Hotline or at <http://www.epa.gov/lead>.

Summary Information for Violation of a MCL, MRDL, AL, TT, or Monitoring and Reporting Requirement

VIOLATION OF A MCL,MRDL,AL,TT, OR MONITORING AND REPORTING REQUIREMENT				
Violation	Explanation	Duration	Actions Taken To Correct the Violation	Health Effects Language
Lead				Infants and children who drink water containing lead in excess of the action level may experience delays in their physical or mental development. Children may show slight deficits in attention span and learning abilities. Adults who drink this water over many years may develop kidney problems or high blood pressure.

Total Trihalomethanes (TTHMs)				Some people who drink water containing trihalomethanes in excess of the MCL over many years may experience liver, kidney, or central nervous system problems, and may have an increased risk of getting cancer.
Haloacetic Acids (five)				Some people who drink water containing haloacetic acids in excess of the MCL over many years may have an increased risk of getting cancer.

2019 Consumer Confidence Report

Drinking Water Assessment Information

Assessment Information

VRWD has five active groundwater wells as its groundwater sources. The active wells are Wells 1, 2, 3, 4 and 7. There are no sewer lines or sewage disposal facilities located within 50 and 100 feet of well sites, respectively. The five well sites are fenced for security. The wells are located about 700 feet from an active stream (when water is flowing). VRWD conducted the drinking water source assessment of its active wells. Well 1 and 2' s assessments was completed back in August 2001; Well 4' s assessment was completed in March 2007.

- Well 01 (1989) -) - Moderate physical barrier effectiveness.
Possible Contaminating Activities (top ranked):
Sewer collection systems; animal grazing; low density septic systems, agricultural drainage; agricultural wells; NPDES/WDR permitted discharges; historic waste dumps/ landfills; storm drain discharge; storm water detention facility, roads and freeways; surface water
- Well 02 - Low physical barrier effectiveness.
Possible Contaminating Activities (top ranked):
Sewer collection systems; utility stations; green waste transfer station; animal grazing; high and low density septic systems, agricultural drainage; agricultural wells; irrigated crops; NPDES/WDR permitted discharges; historic gas stations; historic waste dumps/ landfills; abandoned wells; storm drain discharge; storm water detention facility; roads and freeways; surface water
- Well 03 - Active - - --- physical barrier effectiveness.
Possible Contaminating Activities (top ranked):
Septic systems
- Well 04 (2007) - - Moderate physical barrier effectiveness.
Possible Contaminating Activities (top ranked):
Sewer collection systems; green waste processing; high and low density septic systems; animal grazing; agricultural drainage; agricultural wells; fertilizer, pesticide/ herbicide application; NPDES/WDR permitted discharges; historic gas stations and waste dumps/ landfills; underground storage tanks [confirmed; above ground storage tanks; storm drain discharge; storm water detention facility; surface water
- Well 07 (New) - Moderate physical barrier effectiveness.
Possible Contaminating Activities (top ranked):
Sewer collection systems; animal grazing; low density septic systems, agricultural drainage; agricultural wells; NPDES/WDR permitted discharges; historic waste dumps/ landfills; storm drain discharge; storm water detention facility, roads and freeways; surface water

Discussion of Vulnerability

Well 1

The well was constructed in 1989 with a depth of 242 feet. An 8- inch sewer line is located about 60 feet west/northwest of the well and a single family residence' s septic system is located about 120 feet east of the well. The well site is within the Ventura River flood zone. The well is located over 150 feet from the river and therefore not subject to the SWTR requirements. The well is housed in a concrete block building. It has a 55 feet deep annular seal and a concrete surface seal. The well is equipped with a 16- inch steel casing and is packed with gravel. The highest perforations are 92 feet below the ground level. There are no clay layers located above the highest perforations. The well has a deep water turbine pump which is powered by an electrical motor. The well's air release valve is screened. Well 1 is the primary well and the only one pumping currently.

Well 3

The well was constructed in 1969 with a depth of 220 feet. It is housed in a metal building in a fenced site behind an office yard. The well is equipped with a 16- inch steel casing and packed with gravel. It is surface sealed and has an annular depth of 50 feet. The perforations begin at 70 feet below surface. The well' s geological formation is a mix of rock and clay from the ground surface down to the highest perforations. VRWD screened the well' s air release valve during the Sanitary Survey. The well will be shut down for the rest of this year (last used in July).

Well 4

The well was constructed in 2007 with a depth of 250 feet. It is located in the Ventura River flood zone, but the flow in the river is over 150 feet away and therefore the well is not subjected to the SWTR requirements. An 8- inch sanitary sewer line runs about 125 feet from the well. A 16- inch 304 Stainless Steel casing was installed for the well. A cement grout annular seal was constructed from the surface to 50 feet below the ground surface. The well has a concrete surface seal. The well is housed in a concrete block building. The highest perforation is 73 feet deep and extends down to the 120 feet. The well' s air release valve is screened. The well has been offline since 2013. VRWD shall sample the well for nitrate and bacteriological activities before putting it back into service. VRWD shall also complete the Title 22 chemical testing of the well water prior to providing it to customers.

Acquiring Information

A copy of the complete assessment may be viewed at: www.VenturaRiverWD.com/Reports
SWRCB Division of Drinking Water District Office
1180 Eugenia Place
Suite 200
Carpinteria, CA 930135

You may request a summary of the assessment be sent to you by contacting:

Jeff Densmore
District Engineer
(805) 566-1326
jeff.densmore@cdph.ca.gov

Sulfate (ppm)	500	NA	161	NA	39	NA	NA	NA	2019	2019	Run-off /leaching from natural deposits; industrial wastes

ADDITIONAL CONSTITUENTS

Additional Constituents (Unregulated)	PHG (NL)	Lake Casitas Treated		Mira Monte Well		Distribution System		Year Tested		SOURCE OF CONSTITUENT	
		AVERAGE	RANGE	AVERAGE	RANGE	AVERAGE	RANGE	Lake/Dist. Syst.	Well		
Alkalinity Total as CaCO3 (ppm)	NA	NA	140	NA	160	NA	159 ^f	157 - 164 ^f	2019	2019	A measure of the capacity to neutralize acid
pH(units)	6.5-8.5 US EPA	NA	7.6	NA	7.3	7.1-7.3 ^f	7.5 ^f	7.3 - 8.0 ^f	2019	2019	A measure of acidity or alkalinity
Bicarbonate Alkalinity HCO3 (ppm)	NA	NA	170	NA	190	NA	NA	NA	2019	2019	A measure of the capacity to neutralize acid
Corrosivity (Langlier Index) ^g	NA	NA	0.01	NA	-0.20	NA	NA	NA	2019	2019	Indicator of corrosion. A positive Langlier Index indicates the water is non-corrosive
Boron (ppb)	NA	(1000)	200	NA	ND	NA	NA	NA	2019	2019	A naturally-occurring element
Calcium (ppm)	NA	NA	53	NA	53	NA	NA	NA	2019	2019	A naturally-occurring element
Magnesium (ppm)	NA	NA	26	NA	16	NA	NA	NA	2019	2019	A naturally-occurring element
Potassium (ppm)	NA	NA	4	NA	ND	NA	NA	NA	2019	2019	A naturally-occurring element
Total Hardness (ppm)	NA	NA	30 ^h (14.0 grains/gal)	NA	50 ^h (11.6 grains/gal)	NA	NA	NA	2019	2019	"Hardness" is the sum of polyvalent cations present in the water, generally magnesium and calcium. The cations are usually naturally occurring.
Sodium (ppm)	NA	NA	30	NA	50	NA	NA	NA	2019	2019	"Sodium" refers to the salt present in the water and is generally naturally occurring.

Abbreviations and Definitions:

Maximum Contaminant Level (MCL): The highest level of a contaminant that is allowed in drinking water. Primary MCLs are set as close to the PHGs (or MCLGs) as is economically and technologically feasible. Secondary MCLs are set to protect the taste and appearance of drinking water.

Maximum Contaminant Level Goal (MCLG): The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs are set by the U.S. Environmental Protection Agency (USEPA).

Maximum Residual Disinfectant Level (MRDL): The highest level of a disinfectant allowed in drinking water. There is convincing evidence that the addition of a disinfectant is necessary for control of microbial contaminants.

Maximum Residual Disinfectant Level Goal (MRDLG): The level of a drinking water disinfectant below which there is no known or expected risk to health. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

Notification Level: Health based advisory levels established by the State Board for chemicals in drinking water that lack MCLs.

NA - Not Applicable

ND - None Detected

NL - Notification Level

NS - No Sample

NTU - Nephelometric Turbidity Units (a measure of turbidity)

ppm - Parts per million, or milligrams per liter (mg/L)

ppb - Parts per billion, or micrograms per liter (ug/L)

ppt - Parts per trillion or nanograms per liter (ng/L)

RAA: Running Annual Average

uS/cm - Micro Siemens per Centimeter (a measure of specific conductance).

Primary Drinking Water Standards (PDWS): MCLs and MRDLs for contaminants that affect health along with their monitoring and reporting requirements, and water treatment requirements.

Public Health Goal (PHG): The level of a contaminant in drinking water below which there is no known or expected risk to health. PHGs are set by the California Environmental Protection Agency.

Regulatory Action Level (RAL): The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.

Secondary Drinking Water Standards (SDWS): MCLs for contaminants that affect taste, odor, or appearance of the drinking water. Contaminants with SDWS do not affect the health at the MCL levels.

Treatment Technique (TT): A required process intended to reduce the level of a contaminant in drinking water.

Water Quality Table Footnotes:

a) Turbidity is a measure of the cloudiness of water and is a good measure of water quality and filtration performance; 100 % of the samples tested for turbidity were below the required TT level of 0.2 NTU

and 100% is the lowest monthly percentage of samples meeting the turbidity limits.

b) During 2019 Casitas collected 155 samples for total coliform bacteria testing according to the Total Coliform Rule. Total Coliform bacteria and E-Coli were detected in one sample. Repeat sampling resulted in all absent results and further investigation lead to a sample tap/site contaminated with bird feces as the likely cause of positive results.

c) Mira Monte Well water receives blending treatment with lake Casitas water and when operated, is sampled weekly for nitrate with the resulting nitrate level averaging 1.2 ppm as nitrogen in 2019.

d) The State allows us to monitor for some contaminants less than once per year because the concentrations of these contaminants do not change frequently. Some of our data, though representative, are more than one year old.

e) Casitas has implemented a corrosion control plan by adding a small amount of phosphate to the water to lower corrosivity and reduce copper levels.

f) Distribution system measurements taken with field kits (not certified laboratory results).

g) Weighted average for blending facility production of Lake Casitas Treated and Mira Monte Well Treated if additional field monitoring is unavailable.

Ventura River Water District

Analytical Results By FGL - 2019
